

HOUGHTON CHEMICAL CORPORATION

Specialized Glycol Services

Why use more than one vendor? Houghton Chemical can do it all for you. Call us today if you want a full service glycol supplier and service company.

Propylene Glycol & Ethylene Glycol Removal

Houghton assists with the process of propylene & ethylene glycol removal. The inhibited glycol solution can be removed with a tanker truck. Drums or totes can be picked up or dropped off at one of our facilities.

Do you Need to Boost Glycol Concentration?

Houghton will send a multi-compartment truck to your job site. Our driver will hook up to the glycol system and unload the low concentration glycol into one trailer compartment. The other compartment will offload concentrated glycol into the system. This process will boost system concentration to the desired freeze point. Houghton will then haul away the removed glycol.

Looking to Store Inhibited Glycol during System Repairs?

Houghton provides glycol storage at a Houghton terminal or on-site during quick repairs. Options include overnight or weekly storage. During storage, we can increase glycol concentration, add inhibitors, filter glycol, or add more dye.

Do you Need to Filter your Glycol?

Houghton Chemical provides glycol filtration services. We will circulate the glycol through our trailer while running through a filter. Filtration services can occur on-site or at a Houghton terminal. During this process, Houghton can re-inhibit, adjust concentration, or add dye to the glycol per your request.

Services are available throughout the Northeast and Mid-Atlantic States
